DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-5, drawn to a camera, an imaging element, a power supply control, and a control portion, classified in class 348, subclass 372.
 - II. Claims 6-8, drawn to a camera, an imaging element, a voltage control portion, a read portion, and an amplification portion, classified in class 348, subclass 220.1.
 - III. Claims 9-24, drawn to a camera, an interlace read type imaging element, a charge flushing portion, a signal read portion, and a conversion portion, classified in class 348, subclass 314.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II, and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as controlling the power supply to provide specific voltages at specific times and does not require the specifics of any of the other above subcombinations. Similar separate utility determinations may be performed on the remaining groups. See MPEP § 806.05(d).
3. Since the separate groups have been shown to have separate utility and classified in separate classification areas, it is shown each group would require separate searching and thus are divergent subject matter.

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

4. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103 (a) of the other invention.

5. A telephone call was made to Leonard Holtz on 21 March 2007 to request an oral election to the above restriction requirement, but did not result in an election being made.
